

Website Description& Functionality

The website allows students to quickly create their study timetable while surfing on the web. It consists of three web pages:

First Web page – Homepage

This is where the user enters their username and email. There are validators in place to make sure that the fields are entered. The user input is then stored into a cookie. A session is used alongside another cookie to store the semester that the user wants to create a calendar for. When the user clicks on the Create schedule button, the user is directed to the second web page.

Second Web page - Display exam month calendar

This page will appear when the Create button is clicked. The exam dates will appear when the web page loads. The user will be able to custom make their exam schedule. When the insert button is clicked the user will receive a message confirming that they have successfully created the session. The web page also has two hyperlinks, the back one allows the user to return to the home page and the second one allows the user to check their schedule.

Third Web page – Display all created study sessions

In this web page the user will be able to view their created session. They can make changes such as update duration of study session, delete a session and search as they type. This web page will have a hyperlink to allow the user to go back to the calendar web page if they wish to insert another study session.
